DETAILED ACTION

Response to Amendment

1. Applicant's arguments, see pages 2-7, filed October 11, 2005, with respect to Claims 1-13 have been fully considered and are persuasive. The rejections under 35 U.S.C. 103(a) of Claims 1-5 and 8-12 have been withdrawn.

Allowable Subject Matter

2. Claims 1-13 are allowed.

The following is an examiner's statement of reasons for allowance:

3. The prior art taken singly or in combination do not to teach or suggest synchronizing if the comparisons of the n sync signals are greater on the average than a preset threshold, as recited in Claims 1 and 10. Claims 2-9 and 11-13 depend from these claims, and therefore also contain allowable subject matter.

4. The closest prior art (Srivastava US005121086A) teaches synchronizing display scan systems (Col. 1, lines 6-8). The threshold detector (60, Figure 3) responds to detect large frequency corrections (Col. 6, lines 1-4). If the frequency error is substantial, the output of the error amplifier applied to the threshold detector exceeds the upper threshold therein producing an output signal at terminal 61 (Col. 8, lines 19-22). The output signal at terminal 61 is coupled to the error integrator (Col. 8, lines 22-25, 48-50). This error integrator averages the output. If the

average error is many times down, then the up/down counter is clocked down. The process repeats till the error is reduced and the limit decoder stops providing the excitation at the up/down counter's input terminal (Col. 8, lines 50-61). However, Srivastava does not disclose computing average sync signal timing comparisons, but averages the output pulses on an up/down counter through a circuit (Col. 8, lines 50-53). Srivastava does not decide that the incoming synchronization signal is valid; instead, Srivastava uses the threshold as a method to determine when the invention should produce a long term change in the steady state of the oscillator instead of a short term change (Col. 6, lines 60-64; Col. 8, lines 61-65).

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art of Record

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Srivastava (US005121086A) teaches a method of removing static error from an oscillator control system (Col. 3, lines 15-18) by appropriate long term change or shift of the steady state or free running frequency of the oscillator (Col. 8, lines 61-64) which is applied in a television receiver receive a channel (Col. 3, lines 40-66).
